## Software Developer

Email: paarth.sanyal@gmail.com | LinkedIn: www.linkedin.com/in/paarthasanyal | GitHub: www.github.com/bigdadongit

### Professional Summary

Computer Science undergraduate specializing in backend and full-stack software development. Experienced in building scalable web applications, RESTful APIs, and Android applications. Strong proficiency in Java, Python, C++, JavaScript, Node.js, MongoDB, Firebase, and AWS. Hands-on experience with system design, database optimization, and cloud-based architectures. Passionate about developing efficient, secure, and production-ready software solutions.

### Internship Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                            |

| <b>Web Developer Intern — AI Authority</b>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Oct 2025 – Dec 2025</b> |
| <ul style="list-style-type: none"><li>Converted static website into dynamic MERN-based web application.</li><li>Developed frontend components using React.js.</li><li>Built RESTful backend APIs using Node.js and Express.js.</li><li>Implemented secure payment gateway integration.</li><li>Built Learning Management System (LMS) with authentication and certificate generation.</li><li>Designed MongoDB schemas and optimized queries.</li></ul> |                            |

### Projects

|                                                                                                                                                                                                                                           |             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Kidney Stone Detection System</b>                                                                                                                                                                                                      | <b>2024</b> |
| <b>Tech Stack:</b> Python, Deep Learning (CNN), SVM                                                                                                                                                                                       |             |
| <ul style="list-style-type: none"><li>Developed CNN-based model achieving 95% accuracy.</li><li>Implemented preprocessing and automated prediction pipeline.</li><li>Reduced recurrence risk by 30% using data-driven insights.</li></ul> |             |
| <b>DeNote — Decentralized Notes Application</b>                                                                                                                                                                                           | <b>2025</b> |
| <b>Tech Stack:</b> Jetpack Compose, Node.js, Express, MongoDB, IPFS                                                                                                                                                                       |             |
| <ul style="list-style-type: none"><li>Built decentralized file storage using IPFS and Pinata.</li><li>Developed backend APIs supporting 150+ daily uploads.</li><li>Reduced document reload latency by 40%.</li></ul>                     |             |
| <b>Violet — E-Commerce Android Application</b>                                                                                                                                                                                            | <b>2025</b> |
| <b>Tech Stack:</b> Java, XML, Node.js, Express, MongoDB, AWS S3, JWT                                                                                                                                                                      |             |
| <ul style="list-style-type: none"><li>Developed Android app with 12+ screens.</li><li>Implemented JWT authentication and AWS S3 integration.</li><li>Reduced redundant API calls by 35%.</li></ul>                                        |             |

### Technical Skills

- Languages:** Java, Python, C++, JavaScript, SQL, HTML, CSS
- Frameworks:** React.js, Node.js, Express.js, Jetpack Compose
- Databases:** MongoDB, MySQL
- Cloud & Tools:** AWS, Docker, Git, GitHub, VS Code
- Core CS:** Data Structures, Algorithms, OOPS, DBMS, Operating Systems
